TRACER 9

9th International Conference on Tracers and Tracing Methods 14 – 16 May 2024, Benicàssim, Spain

The TRACER 9 conference on Tracers and Tracing methods has been held in Benicassim (Spain) 14-15-16 May 2024 with 37 participants from 18 different countries (Europe, Africa, America and Asia-Pacific). TRACER 9 conference has been nicely organised by University of Lorraine (Nancy - France), in cooperation with University Jaime 1 (Castello de la Plana - Spain), with the logistical support of UL-Propuls.

Thematic areas of the conference included hydrodynamics studies using tracing methods, residence time distribution (RTD), nucleonic control systems, systemic modeling, compartmental modeling and Computational Fluid Dynamics (CFD) simulations. The conference was also open to presentations about new technical features concerning tracers, methods, devices, and applications in industry.

There were 5 keynote talks, 25 oral presentations and 5 posters. 2 workshops on modeling (CFD and RTD) have been organised the third day.

ISTRA supported the participation of 6 people from Europe, Africa and Asia – Pacific.

The participants expressed their appreciation to conference organizers who have been able to manage the conference in a nice and friendly manner.

The organizers thanked the conference participants for their presence and active participation in the entire programme and expressed the hope that the networking and collaboration, initiated through the conference, will continue. This should hopefully result in a massive turn out at Tracer 10!
